ABSTRACT OF THE DISCLOSURE

In an image input/output apparatus which stores image data input from a reader unit into a hard disk and outputs the stored image data to a printer unit, an operation unit for setting an image processing content to be performed by the printer unit when the image data is input is disposed, the image processing content capable of being set by the operation unit is restricted according to the detection output of a structure of the printer unit, and it is previously selected whether or not the setting restriction of the image processing content is to be performed.
